Java Stdin and Stdout II 🔖

👤 by **Shafaet**

Problem	Submissions	Leaderboard	Discussions	Editorial

In this challenge, you must read an *integer*, a *double*, and a *String* from stdin, then print the values according to the instructions in the *Output Format* section below. To make the problem a little easier, a portion of the code is provided for you in the editor.

Note: We recommend completing Java Stdin and Stdout I before attempting this challenge.

Input Format

There are three lines of input:

1. The first line contains an *integer*.

2. The second line contains a *double*.

3. The third line contains a *String*.

Output Format

There are three lines of output:

1. On the first line, print `String:` followed by the unaltered *String* read from stdin.

2. On the second line, print `Double:` followed by the unaltered *double* read from stdin.

3. On the third line, print `Int:` followed by the unaltered *integer* read from stdin.

To make the problem easier, a portion of the code is already provided in the editor.

Note: If you use the *nextLine()* method immediately following the *nextInt()* method, recall that *nextInt()* reads integer tokens; because of this, the last newline character for that line of integer input is still queued in the input buffer and the next *nextLine()* will be reading the remainder of the integer line (which is empty).

Sample Input

```
42
3.1415
Welcome to HackerRank's Java tutorials!
```

Sample Output

```
String: Welcome to HackerRank's Java tutorials!
Double: 3.1415
Int: 42
```

f   t   in

Java 8 ⌄

```java
1  import java.util.Scanner;
2
3  public class Solution {
4
5      public static void main(String[] args) {
6          Scanner scan = new Scanner(System.in);
7          int i = scan.nextInt();
8
9          // Write your code here.
10
11         System.out.println("String: " + s);
12         System.out.println("Double: " + d);
13         System.out.println("Int: " + i);
14     }
15 }
16
```
